I composed an original jazz piece.

I planned a month-long research trip assisted by my professor.

I analyzed environmental impacts of vertical farming.

Produce

For her visual arts senior thesis, Jessica Zhou produced a fashion show related to her many identities: woman, Texan, Chinese American and busy Princeton student. She designed and sewed 13 original looks. Zhou also combined her studies in psychology and art by color-coding facial images based on emotions and turning the images into fabric for a dress.

Undergraduate Research
at Princeton

Pursue Your Passion

I was inspired while reflecting on campus.

I brainstormed ideas for my thesis with friends.

My adviser helped me develop an original research topic.

Explore

What will you discover?

Independent work means the chance for you to pursue original research and scholarship under the mentorship of a faculty member. Our academic program will help you grow as a scholar. What will you create?

Imagine

You have a complex topic in philosophy you want to explore. Your roommate is delving into innovative research in molecular biology. A friend majoring in computer science wants to try a new approach to solve a long-standing problem. What are you all doing? Research. Even more than that, research into your senior thesis, where an afternoon with friends at "senior thesis boot camp" is a shared experience in each of your academic journeys.

Caltch professor Frances Arnold is Princeton's first female alum to win a Nobel Prize. She majored in mechanical and aerospace engineering, yet won the Nobel in chemistry. Arnold said Princeton's liberal arts education allowed her to explore different opportunities and helped her make connections across disciplines.

The Princeton University Library has more than **10** million books.

As a first-generation student from a public school, Nicolette D'Angelo didn't know Greek or Latin before coming to Princeton. She ended up majoring in classics and studying in Greece and Rome. Next, she will pursue a master's degree at Oxford as a Rhodes Scholar. She hopes to help more people understand ancient texts through a modern lens.
